

Stop Work Authority Policy

It is Company policy to constantly monitor the safety and health of its employees, protection of the environment and integrity of the asset. Therefore, all personnel working on a Company rig or installation shall ensure that their actions reflect these directives utilising their knowledge and understanding of approved policies and procedures in order to safely perform any task.

However, if at any time an unsafe act or unsafe condition is observed during any operation, any Company employee or subcontractor, independent of rank or seniority, has the **AUTHORITY TO STOP THE WORK** so that the acts or conditions are reevaluated and safe operating conditions are reestablished.

Timely intervention stopping an unsafe operation can avoid undesirable and potentially harmful events.
